

- A tunnel just under the river with a glass roof supported by steel beams
- Boat traffic passes unimpeded over the tunnel
- Glass roof allows light to enter the tunnel from above through the water and lets the people using the tunnel see the boats from below.
- The tunnel is divided into three sections for bikes, cars and pedestrians.

- Decorative steel beams in a truss shape above the water as a nod to the shape of the original bridge
- Truss painted white and lit with colored lights at night
